

VisionTrust Assurance

Offline Computer-Vision Integrity & Provenance Framework

Report ID: REP-F0D5AF7B977F | Generated: 2026-09-23T13:57:43.069370+00:00 (Air-Gapped)

Overall Assurance Verdict

ACCEPT

Overall Risk Score: 0.0 / 100 (LOW)

Executive Summary: No integrity violations or anomalies detected.

Metric	Value	Metric	Value
Critical Findings	0	Dataset Sample Count	49
High Findings	0	Dataset Classes	3
Medium Findings	0	Model Access Mode	N/A
Low Findings	0	Model Parameter Count	N/A
Inference Records Tracked	3	Tampered Inferences	0

Integrity & Security Findings

No critical findings or integrity violations reported.

Assurance Threat Coverage Statement

ID	Attack / Threat Capability	Status	Access Mode	Primary Method
T1	Label Flipping Detection	SUPPORTED	Dataset Labels + I	Feature k-NN neighborhood consensus & imbalan...
T2	Systematic Mislabelling	SUPPORTED	Dataset Metadata +	Hierarchical contributor & batch anomaly roll...

T11	Provenance Configuration Substitution	SUPPORTED	Provenance Metadat	Canonical JSON serialization hashing for prep...
T12	Distribution Shift & Drift	SUPPORTED	Reference & Candid	PSI, 2-sample KS test, Wasserstein distance, ...

System Limitations & Air-Gap Compliance

- Framework runs 100% locally and does not transmit data or consult cloud foundation models.
- Statistical heuristics cannot mathematically prove total absence of steganographic or adversarial latent triggers.

- Model weight analysis on ONNX models depends on initializers embedded within the graph file.
- Offline cryptographic protection guarantees tamper-evident provenance but assumes private key is stored securely in air-gapped host.
